

Values Work

n has two new requirements:

e a value returned from the

value must be the same type as the function's return type.

the return value get returned

to the place where the

For example, if you have the

```
#include <iostream>

bool morning = true;

std::string make_sandwich(){

    std::string sandwich = "";
    sandwich += "bread\n";
    if (morning == true) {
        sandwich += "egg\n";
    }
    sandwich += "cheese\n";
    sandwich += "bread\n";
    return sandwich;
}

int main {

    std::cout << "Your sandwich now:\n" << make_sandwich();
}
```
